VHHOPE

Phaco Emulsification System

with In-Built Venturi Pump

Product Catalog

KINYA Medical Systems and Solution

Why Venturi Pump ?

Venturi Pumps are preferred for their speed, efficiency, and ability to generate vacuum without tip Occlusion, making them ideal for high-volume surgeons, dense cataracts, and FLACS.

They excel in followability, drawing fragments to the tip, which reduces Phaco time and energy compared to Peristaltic Systems.

Key Innovation in your Access

Efficient Fragment Removal Reduced Phaco Energy Versatility across Cataract Types

40KHz 4-Crystal Phaco Handpiece

Continuous , Pulse , Burst

Smart Pulse Modes

2.8 / 2.2 mm Phaco

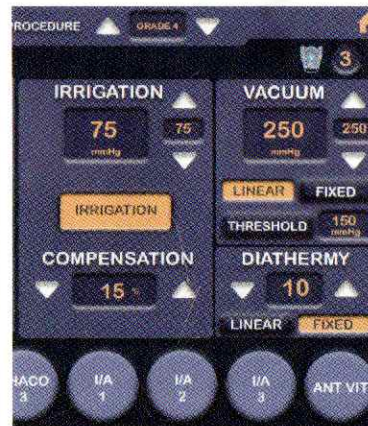

Rapid Vacuum Generation Superior Followability

In-Built Venturi Pump

650mmHg in 1.5 Sec

Threshold Vacuum for Instant Hold

Linear and Predictable

Enhanced Chamber Stability

Automated Irrigation Control

Compensation Mechanism for

Maintaining stable chamber and

surge Protection
